M. Pharm. Semester-I  
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS  
Interdisciplinary paper - I  
Modern Analytical Techniques-I Theory  
Subject code: 1612010002010100  
(Three hours per week, 3 credits)

OBJECTIVE OF THE COURSE:  
To make students familiar with the principles of modern analytical techniques and it’s application in pharmacy.

STUDENT LEARNING OUTCOMES/OBJECTIVES:  
At the end of the course, the student will be able to understand the fundamental concept of modern analytical techniques, which is important for qualitative as well as quantitative analysis of drug substances and drug product. And also several aspects of the interpretations of the various spectroscopic data.

UNIT-I  
UV-VISIBLE SPECTROSCOPY:  

INFRARED SPECTROPHOTOMETRY:  
Introduction, basic principles, and sampling techniques, interpretation of spectra, applications in Pharmacy. FT-IR, Attenuated Total Reflectance (ATR), near infra red Spectroscopy (NIR) -theory and applications.

UNIT-II  
ATOMIC ABSORPTION AND PLASMA EMISSION SPECTROSCOPY:  
Principle, instrumentation, interferences and applications in Pharmacy.

REFERENCE STANDARDS  
Reference standards source, preparation, characterization, usage, storage and records.

UNIT-III  
NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY  
Fundamental Principles and Theory, Instrumentation, solvents, chemical shift, and factors affecting chemical shift, spin-spin coupling, coupling constant, and
factors influencing the value of coupling constant, spin-spin decoupling, proton exchange reactions, simplification of complex spectra, FTNMR, 2D -NMR and applications in Pharmacy, interpretation of spectra. C13 NMR-Introduction, Natural abundance, C13 NMR Spectra and its structural applications.

UNIT-IV
MASS SPECTROSCOPY
Basic principles and instrumentation, ion formation and types, fragmentation processes and fragmentation pattern, Chemical ionization mass spectroscopy (CIMS), Field Ionization Mass, Fast atom Bombardment MS (FAB-MS), Matrix assisted laser desorption/ ionization MS (MALDI-MS), Interpretation of spectra and application in pharmacy.

Books Recommended:
1. Instrumental Methods of Analysis - Scoog and West.
3. Instrumental Method of Analysis - Willard Dean & Merrit.
14. IP/BP/USP.
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – I
Modern Analytical Techniques-I, Interdisciplinary paper - II
Practical-I
Subject code: ----
(Six hours per week, 3 credits)

1. Use of colorimeter for analysis of Pharmacopoeial compounds and their formulations.
2. Use of Spectrophotometer for analysis for Pharmacopoeial compounds and their formulations.
3. Simultaneous estimation of combination formulations (minimum of 4 experiments)
   a. Vitamins
   b. Oral
   antidiabetics c. 
   NSAIDs
   d. Antimicrobials
   e. Antihistamines
   f. Antihypertensive etc.
4. Effect of pH and solvent on UV Spectrum of certain drugs.
5. Experiments on flame photometry.
6. Use of fluorimeter for analysis of Pharmacopoeial compounds.
7. IR, NMR and Mass Spectroscopy – Interpretation of spectra & Structural elucidation
   (at least for 4 compounds each).
   7. Any other relevant exercises based on theory
Objective:
To make students familiar with principle of Biological standardization, Sterility testing, Pre- clinical and clinical research, BA- BE studies and Bio-analytical sample preparation and Good clinical practices.

Student Learning Outcome:
At the end of the course, the students will be able to understand the fundamental concept of Pre-clinical and clinical research, Bio-analytical sample preparation, Biological standardization, Sterility testing and BA- BE studies.

Unit- I

b. Sterility Tests: Methodology & Interpretation.

c. Pyrogen - chemistry and properties of bacterial pyrogens and endotoxins. Mechanism of action of pyrogens. Pharmaceutical aspects, pyrogen test of IP compared to that of B & USP. Interpretation of data, Comparison of LAL and other pyrogen tests.

d. Microbiological Limit Tests, Tests for effectiveness of antimicrobial preservatives.

Unit-II

a. Preclinical Drug Evaluation, acute, sub acute and chronic toxicity studies, LD50 & ED50 determination, evaluation of compound for its biological activity, study of special toxicities like teratogenicity and mutagenicity.

b. Clinical Research—
   I. Clinical Research Protocols, objective and protocol design.
   II. Helsinki declaration, US-FDA & ICH guideline for Clinical trials for drugs and dosage forms, reviews and approval of Clinical Study.
   III. Good Clinical Practices.

Unit-III

a. Biological classification system (BCS); its significance on dissolution study and application in dosage form development.

b. Analysis of drugs from biological samples including, selection of biological sample, extraction of drugs by various methods as LLE, SPE and Membrane filtration.
Unit-IV

**Bioavailability:** Objectives and consideration in bio-availability studies, Concept of equivalents, Measurements of bio-availability, Determination of the rate of absorption, Bioequivalence and its importance, Regulatory aspects of bio-availability and bioequivalence studies for conventional dosage forms and controlled drug delivery systems.

Unit-V

**Pharmacokinetics:** Basic consideration, Pharmacokinetic models, Application of Pharmacokinetics in new drug development and designing of dosage forms and Novel drug delivery systems

**Reference Books:**

1. Indian Pharmacopoeia (IP’96, IP 2007)
9. N.Y. Leon Shargel, —Applied Biopharmaceutics and Pharmacokinetics‖.
10. Welling and Tse—Pharmacokinetic
11. Gibaldi and Perrier—Pharmacokinetics
13. Rowland and Tozer—Clinical Pharmacokinetics, concepts and application.
15. John Wagner—Pharmacokinetics for Pharmaceutical scientist.
M. Pharm. Semester-I
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – I (Quality Assurance)
Subject of Specialization paper – I (Core Subject-II)
Biological Evaluations and Clinical Research (Practical)
Subject code:-----
(Twelve hours per week, 6 credits)

PRACTICAL:
1. Oral and practical examination in general course illustrative of theory section
2. Statistical analysis include data acquisition, processing and retrievals
3. Practice in developing of analytical method of drug substances
4. To determine the effect of different factors affecting absorbance maximum wavelength
5. The calibration of lab equipment as well as apparatus.
6. To perform assay of different pharmaceutical formulation as per IP.
M. Pharm. Semester-I
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – I (Quality Assurance)
Subject of Specialization paper – II (Core Subject-III)
Good Manufacturing and Good Laboratory Practice
Subject code: 1612030502010300
(Four hours per week, 4 credits)

Objective:
To make students familiar with the principle of quality Assurance, Good manufacturing Practices and Good Laboratory Practices and its application in pharmaceutical industry.

Student Learning Outcome:
At the end of the course students will be able to understand the fundamental concepts of Quality control and Quality Assurance which is important to maintain quality and safety of pharmaceutical product.

Unit-I 12 Hours
a. Concepts of Philosophy of Quality assurance, GMP, cGMP, GLP has applied to the pharmaceutical industry
b. WHO certification scheme
c. Development of Monograph
d. Self inspection and Quality audit, loan licensing Audit-concept, Auditing

Unit-II 12 Hours
Good Manufacturing Practices
a. Organization & Personnel, responsibilities, training, hygiene.
b. Premises: Location, design, Plant Layout, Construction, Maintenance and Sanitation, Environmental control, utilities and services like gas, water, maintenance of sterile areas, and control of contamination.
c. Equipments: Selection, purchase specifications, maintenance, clean in place, sterilize in place, Methods (TP & STP).
d. Raw Materials: Purchase specifications, maintenance of Stores, selection of Vendors, control on raw materials and finished dosage forms.

Unit-III 12 Hours
b. In Process quality controls on various dosage forms: Sterile and non sterile, standard operating procedures for various operations like cleaning, filling, drying, compression, coating, disinfections, sterilization,
membrane filtration etc.

c. Packaging and labelling control, Line clearance, reconciliation of labels, cartons and other packaging materials.

Unit-IV  
12 Hours

a. Quality control Laboratory: Responsibilities. Routine controls instruments, reagents, sampling plans, standard test Procedures, protocols, data generation and storage, quality control documents, retention samples, records, audits of quality control facilities.
b. Finished product release, quality review, quality audits and batch release documents.
c. Warehousing, design, construction, maintenance and sanitation; good warehousing practice, materials and management.
d. Distribution and distribution records, handling of returned goods, recovered materials and reprocessing. Complaints and recalls, evaluation of complaints, recall procedures, related records and documents.
e. Waste disposal, scrap disposal procedures and records.

Unit-V  
12 Hours

a. Good Laboratory Practice
b. Specifications for materials, intermediates and finished product. c. Testing of packing material

Reference Books:

5. P. P. Sharma –How to practice GMPs, 3rd edition Vandana Publication.
6. P. P. Sharma –How to practice GLPs, Vandana Publication.
13. GMP practices for pharmaceutical-James Swarbrick.
Multidisciplinary/ Elective Subject-I
SAURASHTRA UNIVERSITY M. PHARM SYLLABUS
Semester – I
Multidisciplinary / Elective paper - I
Pharmaceutical Preformulation Theory
Subject code: 1612040002010401
(Three hours per week, 4 credits)

UNIT – I
General Considerations, Spectroscopy and Assay development, dissociation, partitioning and Solubility of Pharmaceutical Solids, pKa, salts, solvents, $K_{\text{a/w}}$, drug design, phase solubility analysis, solubilisation, release, dissolution and permeation, chiral drug substances, characterization scheme.

UNIT – II
Solid state properties, crystal morphology, melting point and its analysis, microscopy and particle size analysis, laws of crystallography, habit, polymorphism, pseudomorphism, isomorphism, purity, solubility, hygroscopicity, study methods for evaluation of solid state.

UNIT - III
Dosage form consideration in preformulation, solid dosage form, solution formulations, evaluations and its regulatory considerations, stability testing.

UNIT – IV
Preformulation study, Stability aspect and PEGylation based stability of Biopharmaceutical drugs, Stability study of Phytomedicines
REFERENCES

1. Modern Pharmaceutics by G. Banker.
10. Solubility and Solubilisation in Aqueous Media by S. Yalkowsky.
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – I
Multidisciplinary / Elective paper - I
Pharmaceutical and Industrial Biotechnology Theory
Subject code: 1612040002010403
(Three hours per week, 4 credits)
Theory: 4 hours/week (4 Credits)

Unit I
Industrial aspects: Stability studies of biotechnology derived products, Effects of various environmental /processing on stability of the formulation and techniques for stabilization of product against the same regulatory requirement related to stability testing with emphasis on matrixing bracketing techniques, Climatic zones

Unit II
Concept of biotech process validation, Cell lines culture process validation and characterization, Purification process for viral clearance, validation of recovery, Purification, Cleaning, Filtration, Issues of DNA vaccines and plasmid DNA vaccines

Unit III
Analytical methods in protein formulation: concentration, size, purity, surface charge, identity, structure/sequence, shape, activity.

Unit IV
Industrial application of biotech products: industrial enzymes (examples), immobilization of enzymes, their applications in industry, Immobilized Enzyme engineering, Kinetics of immobilized enzymes, novel methods for enzyme and vaccine production.

READING MATERIAL

SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – I
Multidisciplinary / Elective paper - I
Methods in Biological Evaluation of Drugs Theory
Subject code: 1612040002010402
(Three hours per week, 4 credits)

Unit-1
A. Biological standardization, general principles, Scope and limitation of bio-
assay, bioassay of some official drugs.
B. Preclinical drug evaluation of its biological activity, potency and toxicity-
Toxicity test in animals including acute, sub-acute and chronic toxicity,
ED\textsubscript{50} and LD\textsubscript{50} determination, special toxicity test like teratogenicity and
mutagenecity. Various guidelines for toxicity studies. Animal experiments
assessing safety of packaging materials.
C. Selected topics in screening of drugs:
   a. Recent advances in Transgenic and Knockout animals
   b. Administration of Neuropeptides and Neurohormones by
      Intracerebroventricular (ICV) route in rats.
   c. Screening models for drug abuse like alcohol addiction, dependence
      and withdrawal syndrome.
   d. Biostatistics and calculation of doses in experimental pharmacology

Unit -2
A. Pyrogens: Sources, Chemistry and properties of bacterial pyrogens and
   endotoxins, Official pyrogen tests
B. Microbiological assay of antibiotics and vitamins.
C. Biological evaluation of drugs--Screening and evaluation ( including
   principles of screening , development of models for diseases : In vivo
   models / In vitro models / cell line study ) techniques of the following:

Unit -3
A. Parasympathomimetics, Parasympathetic blocking agents,
   Sympathomimetics, Sympathetic blocking agents, Ganglion stimulants and
   blockers, Neuromuscular stimulants and blockers.
B. General and local Anesthetics, Sedatives and Hypnotics, Antiepileptics,
   Psychopharmacological agents, Analgesics, Anti-inflammatory agents,
   Anti-Parkinson’s drugs, CNS Stimulants.
C. Cardiotonics, Anti-hypertensive drugs, Anti-arrhythmic drugs, Drugs used in
   Ischemic Heart Diseases, Drugs used in Atherosclerosis.
Unit 4

A. Drugs used in Peptic Ulcer, Respiratory disorders, Hormone and Endocrine disorders. Anti fertility agents and diuretics.

B. Various models for Cataract, glaucoma, inflammatory bowel disease

Books recommended (Latest Edition):
1. Screening methods in pharmacology (vol I & II)–R.A. Turner
2. Drug Discovery and Evaluation in Pharmacology assay: Vogel
3. Design and analysis of animal studies in pharmaceutical development, Chow, Shein, Ching.
4. Evaluation of Drug Activity: Pharmacometrics D.R. Laurence
5. Animal and Clinical pharmacologic Techniques in Drug Evaluation-Nodine and Siegler
6. Pharmacology and Toxicology- Kale S.R.
7. Fundamentals of experimental Pharmacology- Ghosh M.N.
Objectives of the course
1. To make students familiar with the principles of modern analytical techniques and its application in pharmacy

Students learning outcomes
1. At the end of the course, the student will be able to understand the fundamental concept of modern analytical techniques, which is important for qualitative as well as quantitative analysis of drug substances and drug product.

UNIT-I
CHROMATOGRAPHIC TECHNIQUES: 15 Hours
1. Classification of chromatographic methods based on mechanism of separation.
2. Theories of chromatographic separation. Principles, elution techniques, instrumentation, derivatization and applications of gas chromatography.
3. HPLC and HPTLC. Principles, elution techniques, applications of ion exchange and ion pair chromatography, affinity chromatography, size exclusion chromatography, chiral chromatography, super fluid chromatography (SFC), GC-MS and LC-MS.

UNIT-II
THERMAL METHODS OF ANALYSIS: 5 Hours
1. Theory, instrumentation and applications of Thermo Gravimetric Analysis (TGA), Differential, Thermal Analysis (DTA), Differential Scanning Calorimetry (DSC) and Thermo Mechanical Analysis (TMA).

UNIT-III
X-RAY DIFFRACTION METHODS: 4 Hours
1. Introduction, generation of X-rays, X-ray diffraction, Bragg’s law, X-ray powder diffraction, interpretation of diffraction patterns and applications

OPTICAL ROTARY DISPERSION: 2 Hours
1. Principle, Plain curves, curves with cotton effect, octant rule and its applications with example, circular dichroism and its relation to ORD.

UNIT-IV
RADIO IMMUNO ASSAY: 4 Hours

**ELECTROPHORESIS: 3 Hours**
1. Theory and principles, classifications, instrumentation, moving boundary electrophoresis, Zone Electrophoresis (ZE), Isoelectric focusing (IEF) and applications.

**Books Recommended:**
1. Instrumental Methods of Analysis - Scoog and West.
3. Instrumental Method of Analysis - Willard Dean & Merrit.
14. IP/BP/USP.
18. Absorption Spectroscopy of Organic Molecules — V. M. Parikh, Addision — Wesley
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – II
Interdisciplinary paper - IV
Modern Analytical Techniques-II Practical
Subject code: ----
(Three hours per week, 3 credits)

1. Experiments on Electrophoresis.
2. Experiments of Chromatography.
   a) Thin Layer Chromatography.
   b) Paper Chromatography.
3. Experiments based on HPLC & GC.
4. Thermaograph – Interpretation of spectra (at least for 4 compounds each).
5. Any other relevant exercises based on theory.
M. Pharm. Semester-II
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – II (Quality Assurance)
Subject of Specialization paper – III (Core Subject-IV)
Modern Pharmaceutical Analysis (Theory)
Subject code: 1612020502020200
(Six hours per week, 6 credits)

UNIT-I

a. Application of analytical methods to product obtained through genetic engineering, Amino acid sequence analysis, Tryptic mapping, ion exchange amino acid analysis, isoelectric focusing
b. Calibration of various instruments used for drug analysis

UNIT-II

a. Dissolution study: Importance, objectives, equipments, b. Selection of dissolution medium and conditions,
b. Comparison of dissolution profile by similarity and dissimilarity factor d. In-vivo and In-vitro Co-relation (IVIVC)

UNIT-III

a. Analytical aspects of preformulation study
b. Applications of various analytical techniques in preformulation analysis and its Importance
c. Regulatory requirement in pharmaceutical analysis – US-FDA, ICH

UNIT-IV

a. In-process quality control tests for Tablets, Capsule, Liquid orals, Ophthalmic applications, Aerosols, Sterile parenterals and Scale up operations including packaging and labelling operations.
b. Analysis of drug from biological fluid c. Analysis of Cosmetics

UNIT-V

a. Compendial testing
b. Automated analysis
c. Compendial methods for evaluation of crude drug and herbal formulation
2. **References Books:**

3. Harry G Brittain, Spectroscopy of Pharmaceutical Solids, Drugs and
5. S. Ahuja, Modern Pharmaceutical Analysis

   Analysis, Pharm Sci. series, Vol. 117, Maarcel Dekker Inc., N.Y
7. Peptide and Protein Drug Analysis, by Reid, (Marcel Dekker).
8. Classification of cosmetics raw materials and adjuncts IS 3958 of Indian
   Standards Institution (BIS).
9. Cosmetic and toilet goods – methods of sampling IS 3958 of Indian Standards
10. Institution (BIS).
11. Methods of sampling and test for various cosmetics as laid down by Indian
    Standard Institution (BIS).
    New Delhi, Govt. of India,
13. The International Pharmacopoeia Vol 1,2,3,4, 3rd Edition General methods of
    analysis and quality specifications for pharmaceutical substances, excipients,
    dosage forms.
14. Quality Assurance of Pharmaceuticals – A compendium of guidelines and
17. Phytochemical Methods by J.B.Harborne
18. Pharmacopoeal standards for Ayurvedic Formulation (Council of Research in
    Indian Medicine & Homeopathy)
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – II (Quality Assurance)
Subject of Specialization paper – III (Core Subject-V)
Modern Pharmaceutical Analysis (Practical)
Subject code:---
(Twelve hours per week, 6 credits)

1. Oral and Practical examination in general course illustrative of theory section.
2. Practice in analysis of solid oral dosage form, Injectable dosage form, Drugs in biological fluids and cosmetics, Packaging material
3. Dissolution studies, Comparison of dissolution profile by similarity and dissimilarity factor and IVIVC
4. Determination of active constituents in crude drugs. Eg. Caffeine from tea powder, curcumin from curcuma longa, quinine from cinchona bark etc.
5. Quality Control tests for some herbal formulations.
6. Quality Control tests for some cosmetics
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – II (Quality Assurance)
Subject of Specialization paper – IV (Core Subject-VI)
Regulatory Affairs and New Drug Applications Theory
Subject code: 1612030502020300
(Four hours per week, 4 credits)

UNIT I

a. Contract manufacturing
b. Certification and Licensing Procedures
c. Quality Safety and Legislation for Cosmetic and Herbal
   products d. Site Master File
d. Drug Master File
e. Material Safety Data Sheet (MSDS) preparation

UNIT II

a. Industrial Safety & Health Guide lines for filing in countries like US & EU
b. Drug Regulatory Agencies-Historical perspectives, organization structure
   activities & responsibilities: India US, EU, Japan, ICH
c. Study of compendia – Evolution, Study of parts of compendia like:
   Polices, General notice, Monographs, Comparative picture of IP, USP, BP, &
   EP.

UNIT III

a. Drug regulatory and accrediting agencies of world and their guidelines
   including USFDA, MCA, TGA, MHRA, ANVISA, CTD, WHO, ICH, SUPAC etc.
b. Common Technical Document (CTD)
c. Electronic version of the Common Technical Document (eCTD)

UNIT IV

a. Investigational New Drug (IND) application, format & content of IND,
   general consideration of New Drug Application (NDA) and Abbreviated
   New Drug Application (ANDA) and specific requirements, content &
   format of NDA and ANDA

UNIT V

a. Legislation to regulate, import, manufacture distribution and sales of
   drug and cosmetic Act 1940 & rules 1945 with amendments.
b. Regulatory aspects of pharmaceutical and bulk drug manufacture and
   biotechnology derived product.
c. Aims, objects and salient features of following legislations governing
   Pharmaceutical Industry-
i. Pollution Control Act
ii. Prevention of Food Adulteration Act 1954
iii. Industrial Development & Regulation Act 1951
iv. Consumer Protection Act

Multidisciplinary/ Elective Subject-II
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – II Multidisciplinary /
Elective paper – II
NDDS: Multidisciplinary and Regulatory Aspects Theory
Subject code: 1612040002020401
(Four hours per week, 4 credits)

UNIT- I
Introduction and overview of Novel Drug Delivery Systems (NDDSs) - Particulate Drug delivery (Microshpres, Microcapsules, Nanosheres, Nanocapusels, Polymeric beads, etc.) - Vesicular Drug delivery (Liposomes, Ethosomes, Neosomes, etc.) - In situ gelling systems - Transdermal Drug delivery - Microemulsion, Nanoemulsion, Self emulsifying systems, Nanosuspension, etc. - Targeted Drug delivery - Liquid and Semisolid preparations - Sterile products, Cosmetic products and Aerosolized systems.

UNIT- II
Consideration of various regulations in product development - Organic volatile impurities - Trace impurities - API and product stability - Product registration

UNIT- III
Biotechnologilcal Products: - Formulation development aspects for biotechnological products - Delivery aspects for biotechnologically derived products (Recombinat DNA, Recombinat proteins, Gene delivery, Enzymes, Hormones, etc.) - Product stabilization aspects with consideration of ICH Q5 Section. - Regulatory considerations with consideration of global regulatory guidelines.

UNIT- IV
Herbal and naturally derived Products: - Formulation development aspects - Delivery aspects for herbal and naturally derived medicinal products (Herbal extracts, crud extracts, incorporation of product performance enhancers, etc.) - Product stabilization aspects with consideration of ICH guideline. - Regulatory considerations with consideration of global regulatory guidelines.

UNIT- V
Synthetic and Semisynthetic medicines - Formulation development aspects - Delivery aspects for Synthetic and Semisynthetic medicines. - Product stabilization aspects with consideration of ICH guideline. - Regulatory considerations with consideration of global regulatory guidelines.
Books Recommended:
3. Pharmaceutical Dispensing by Husa
4. Dispensing Pharmacy by Cooper and Goons
6. www.fda.gov/RegulatoryInformation/Guidances
7. Drug stability (Principles and Practices) by Jens Carstensen
8. Stability of drugs and dosage forms by Yoskioka
9. Modern Pharmaceutics by G. S. Banker
10. Biodegradable polymers as drug delivery systems by Cahsin
SAURASHTRA UNIVERSITY M. PHARM SYLLABUS
Semester – II
Multidisciplinary / Elective paper – II
Analysis of Recombinant Proteins and Diagnostics Theory
Subject code: 1612040002020402
(Four hours per week, 4 credits)

A. Analysis:

**UNIT I**

- Total protein assay: Quantitative amino acids analysis, Folin-Lowry protein assay, BCA assay, UV spectrophotometry etc.
- Purity: Protein impurities, contaminants, electrophoretic analysis, HPLC based analysis, DNA content analysis, immunological assays for impurities, combined immunological and electrophoretic methods, host-cell impurities etc.

**UNIT II**

- Test procedures: ICH guidelines.
- Potency assays: In-vitro biochemical methods, cell-line derived assays, whole animal assays etc.

B. Diagnostics:

**UNIT III**

- Principles, methods and applications: Principles and methods of some clinically used diagnostic immunoassays, e.g., homogeneous immunoassays, fluorescence, chemiluminescence and bioluminescence enzyme immunoassays etc., immunosensors.

**UNIT IV**

- Principles, methods applications: DNA probe based diagnostics, sample preparation, hybridization, separation, detection, PCR-RFLP in paternity and forensic cases, SNP detection MALDI and DHPLC.
- Cancer diagnostics, human retroviral diseases specially AIDS. Role of enzymes in diagnostics.

Interdisciplinary paper - V
Research Methodology Theory
Subject code: 1612010002030100
(Three hours per week, 3 credits)

1. Research-Meaning, purpose, Types, (Educational, Clinical, Experimental, historical descriptive, Basic applied and Patent oriented Research) objective of research

2. Literature survey-Use of Library, books and journals-Medlines-Internet, Patent Search, and reprints of articles as a source for Literature survey

3. Selecting a problem and preparing Research proposals

4. Methods and tools use in research –
   A. Qualities studies, quantitative studies
   B. Simple data organization descriptive data analysis,
   C. Limitation & sources of Error
   D. Inquiries in form of Questionnaire, etc.,

5. Documentation-
   A. “How” of documentation
   B. Techniques of documentation
   C. Importance of documentation
   D. Use of computer packages in documentation

   Different parts of the Research paper
   A. Title –Title of project with authors name
   B. Abstract- Statement of the problem, Background list in brief and purpose and scope.
   C. Key Words.
   D. Methology-subject, apparatus, instrumentation & procedure.
   E. Results- tables, graphs, figures & statistical presentation
   F. Discussion support or non support of hypothesis, practical & theoretical Implications
   G. Conclusion
   H. Acknowledgements.
   I. References
   J. Errata
   K. Importance of Spell check for entire project
   L. Uses of footnotes

7. Presentation (especially for oral presentation)
8. Importance, types different skills, contained, format of model, introduction, Poster, Gestures, eye contact, facial, expressions, stage, fright, volume- pitch, speed, pause & language, Visual aids & seating, Questionnaire

9. Cost analysis of the project – cost incurred on raw materials- Procedure, instrumentations and clinical trials

10. Sources for procurement research grants – international agencies, Government and private bodies

11. Industrial-institution interaction- Industrial projects, their, feasibility reports. Interaction with industries

Recommended Books

1. Research In Education- John V. Best, John V. Kahn 7th edition
2. Presentation skills - Michael Hallon- Indian Society for Institute education
3. Practical Introduction o copyright.- Gavin Mcfarlane
5. Scientist in legal Systems- Ann labor science
7. Writing a technical paper- Donald Menzel
9. Protection of industrial Property rights- P. Das & Gokul Das
10. Spelling for the millions- Edna Furness
11. Preparation for publication – King Edward Hospital Fund for London
12. Information Technology – The Hindu speaks
15. Manual for the preparation of industrial feasibility studies
UNIT-I

1. Intellectual property, importance and types of intellectual property
2. Paris conventional, World Trade Organization, WIPO and GATT.

UNIT-II

The Indian Patents Act 1970 and Indian patents (Amendments) Act 2005 and issue related to Patents, Importance, parts of patent, type of patent, provisional application, Oppositions, Patent infringement, Patent search engines

UNIT-III

Biostatistics and Various statistical methods i.e. Null hypothesis, t- Test, Regression analysis, ANOVA, Chi-square, etc.

UNIT- IV

Optimization Techniques, Design of experiments, Factorial designs, Grid search technique, Response surface methodology, contour plots, etc.
M. Pharm. Semester-III
SAURASHTRA UNIVERSITY M. PHARM. SYLLABUS
Semester – III (Quality Assurance)
Subject of Specialization paper – V (Core Subject-VII)
Validation, Product development and stability testing
Subject code: 1612030502030300
(Six hours per week, 6 credits)

UNIT-1

12 hrs

Introduction to Pharmaceutical Validation:
Definition, scope of Validation, Advantage of Validation, Organization for Validation, Validation Master Plan, Types of process validation, Design Qualification, Installation Qualification, Operational Qualification & Performance Qualification of facilities.

Process Validation
Prospective, concurrent, retrospective & revalidation, Process validation of following formulations
a. Tablets
b. Capsules
c. Ointment/Creams
d. Liquid Orals
e. Parental

UNIT II

Utilities Validation
- Validation of Pharmaceutical Water System
- Validation of HVAC system

Computer System Validation

Cleaning Validation: Cleaning Techniques, Cleaning of Equipment, Cleaning of Facilities

UNIT III

12 hrs

Analytical Method Validation
General principles of analytical method validation.
Development of new analytical method and its validation Validation of following analytical Instruments
a. HPLC/HPTLC
b. Dissolution test apparatus
c. U.V./Visible spectrophotometers
**Calibration Master plan**

Validation of Equipment

Validation of following Equipment/Process

- a. Dry Powder Mixers
- b. Fluid Bed and Tray dryers.
- c. Tablet Compression (Machine)
- d. Dry Heat Sterilization, Moist heat sterilization, Gaseous sterilization, Radiation sterilization and Membrane filtration

**UNIT IV**  
**12 hrs**

- a. Basic concept and objectives of stability study,
- b. Order of reaction and their application in predicting shelf life and half-life of pharmaceutical formulations,
- c. Importance of accelerated stability study,
- d. Effect of various environmental/processing factors (i.e. light, pH, metal etc.,) on stability of the formulation, Regulatory requirement related to stability testing with emphasis on matrixing/bracketing technique, climatic zone, photo stability testing etc.,

**UNIT V**  
**12 hrs**

- a. Application of ICH Quality guideline in pharmaceutical analysis
- b. Quality Topics of ICH Guidelines;
- c. Planning & Managing a Validation Program including Change Control, Scale-Up and Post-Approval Changes (SUPAC), Pre Approval Inspections (PAI) & Technology Transfer Issues

**Reference Books:**

3. Validation Master plan by Terveeks or Deeks, Davis Harwood International publishing.
